

COAI FOUNDING COHORT · 6 WEEKS · LIVE

Stop watching tutorials. Start building like an engineer.

A 6-week live cohort where you build, deploy, and learn to defend **one real ML project** — the way the industry actually works. Not theory you'll forget. Real skills you'll use.

This is for you if:

- ✓ You've finished courses but still can't build something on your own
- ✓ Your projects look like everyone else's — and you know it
- ✓ You're stuck writing code in Jupyter notebooks and don't know how real industry code is written
- ✓ You freeze when an interviewer asks "explain your project"
- ✓ You know Python basics, but the jump to "real ML" feels impossible
- ✓ You can run an algorithm, but you're never sure which one to use, or why

What you'll walk away with

Not theory you'll forget. One real project you'll be proud to show.

You'll build one real, industry-relevant ML project end-to-end — from raw data to a deployed, working system you can show and defend.

Solving a problem you'll actually care about.

Week 1 — Engineering Foundations

Set up your project like a real engineer, with industrial coding habits from day one.

Week 2 — Working With Real Data

The messy, real-world data work that every tutorial quietly skips.

Week 3 — Building & Evaluating the Model

Not just "train a model" — understand it, and know why it works.

Week 4 — Industrial-Grade Code

The jump from notebooks to production-level code, the way companies write it.

Week 5 — Deployment

Turn your model into a live, shareable project with a real link.

Week 6 — Career & Interview Readiness

Present your project on your resume and GitHub — and defend every decision in interviews.

Concepts are taught exactly when the project needs them — so they finally make sense, instead of piling up.

How the cohort works

Live sessions. Real practice. Lifetime access.

WHERE THE REAL VALUE IS

Live Sessions

Ask questions, get unstuck, and get direct feedback in real time — the part no recording can replace.

NOT THEORY WORKSHEETS

Practice Sheets

After each session, a sheet of challenging, industry-style tasks that force you to think and apply — not memorize.

LIFETIME ACCESS

Session Recordings

Every session is recorded and yours to keep — but live is still where it happens.

What you need to join

- Comfortable with **Python basics** — if you can read simple Python, you're ready
- A basic idea of **what machine learning is** — you don't need to have built models before
- **A laptop and curiosity** — the libraries, the workflow, and the concepts, we teach as the project needs them

Akash Gupta

AI Scientist at Yal · B.Tech IIT (BHU) · M.Tech (AI), IIT Kharagpur

I've spent years building real AI systems in industry and mentoring learners along the way. I built CoAI because I kept seeing the same gap: smart, motivated people stuck between finishing tutorials and doing real work. **This cohort is built to close exactly that gap.**

Real feedback from real sessions

"It was a wonderful session. Your explanation was on point and very practical. Keep doing such wonderful sessions."

S **Sumith**
B.Tech Student

"Learned a lot from your session! Got to know what is going on in industry. More such sessions would be really beneficial."

A **Asha**
B.Tech Student

"The session was very insightful. We don't get this kind of knowledge easily — very few people teach these concepts. Thank you so much for taking such sessions."

I **Ishani**
B.Tech Student

This is a **paid founding cohort**. Waitlist members get first access and the founding price before anyone else.

Seats are limited. The first cohort is the smallest — and the most personal.
